

BFHL Wellness Cohort

Design Thinking-Led Product Case Study

Activity | Step Tracker | Diet & Nutrition | Weight Management | Fitness
January 2024 - September 2024

Project Positioning

The Wellness cohort moved BFHL beyond generic wellness content into a structured engagement and care-delivery model combining gamified activity challenges, dietician-led nutrition support, weight management, fitness journeys, follow-up accountability, and corporate wellness monetization.

Dimension	Confirmed Detail
Timeline	January 2024 to September 2024
Organization	Bajaj Finserv Health Limited
Role	Lead Product Manager for the entire Wellness cohort
Reporting Team	Maaz Modak, Saumya Shukla, Pragya Kumpawat, Aditi Rana, Mahak Sonekar
Product Scope	Activity, Step Tracker, Diet & Nutrition, Weight Management, Fitness
Dietician Platform	Custom in-house platform
Initial Dieticians	3 in-house dieticians
Primary Business Objectives	GMC retention and corporate wellness revenue
Major Financial Impact	External dietician vendors fully replaced; INR 95 lakhs saved

1. Executive Summary

The BFHL Wellness cohort was led from January 2024 to September 2024 as an integrated wellness portfolio covering Activity, Step Tracker, Diet & Nutrition, Weight Management, and Fitness. The cohort was designed to support two business objectives: GMC retention and corporate wellness revenue.

The product strategy was not limited to launching wellness features. The deeper product shift was to create a structured wellness engagement and care-delivery model. Activity was addressed through gamified step challenges, virtual routes, rewards, leaderboards, team formats, and social nudges. Diet and Weight Management were addressed through an in-house dietician platform and operating model with expert consultations, personalized diet plans, follow-ups, chat support, reminders, missed-consultation recovery, EMR/progress records, and dietician workflow controls.

As Lead Product Manager, Samadhan owned the full Wellness cohort and led a reporting team including Maaz Modak, Saumya Shukla, Pragya Kumpawat, Aditi Rana, and Mahak Sonekar. The custom in-house dietician platform went live with three in-house dieticians and fully replaced external dietician vendors, creating INR 95 lakhs in savings. The gamified activity challenges also went live across Step Challenge, Everest, Kilimanjaro, team challenges, rewards, and leaderboard formats. Active users was the primary metric for activity challenges.

Executive Positioning

This was a portfolio-level product leadership assignment combining user engagement, care operations, service design, gamification, cost optimization, internal capability building, and corporate wellness monetization.

2. Project Context and Scope

Area	Detail
Time Period	January 2024 to September 2024
Product Portfolio	Wellness cohort
Streams	Activity / Step Tracker, Diet & Nutrition, Weight Management, Fitness
Lead PM	Samadhan Mishra
Reporting Team	Maaz Modak, Saumya Shukla, Pragya Kumpawat, Aditi Rana, Mahak Sonekar
Dietician Platform Type	Custom internal platform
Target Users	All wellness users
Corporate Context	GMC retention and corporate wellness revenue
Activity Challenge Context	Corporate/GMC-linked activity engagement, active users as primary metric

The Wellness cohort sat at the intersection of engagement, health outcomes, service operations, and monetization. Unlike payment, claims, or partner projects, this portfolio required product thinking around human behavior, habit formation, expert-led care, reminders, follow-ups, service quality, and repeat engagement.

3. Strategic Framing

The project should not be framed as simply "wellness features" or "step tracker work." That would understate the portfolio-level nature of the assignment.

Weak Framing	Stronger Framing
Worked on wellness features	Led BFHL Wellness cohort across activity, diet, weight

	management, and fitness
Built a dietician booking flow	Built a custom in-house dietician platform and operating model that replaced external vendors
Launched step challenges	Launched gamified activity journeys with themed challenges, rewards, leaderboards, team formats, and social nudges
Handled nutrition consultations	Created a scalable expert-led wellness care workflow with consultations, personalized diet plans, follow-ups, reminders, chat support, and progress records

Recommended Framing

Led BFHL Wellness from Jan 2024 to Sep 2024, building an integrated wellness engagement and care-delivery portfolio across Activity, Step Tracker, Diet & Nutrition, Weight Management, and Fitness; launched gamified activity challenges and a custom in-house dietician platform that replaced external vendors and saved INR 95 lakhs.

4. Core Design Thinking Insight

The core insight was that wellness cannot be solved through generic health content alone. Wellness users need motivation, expert guidance, habit loops, follow-up accountability, reminders, and measurable care journeys.

Surface Problem	Deeper Product Problem
Users are inactive	Users need motivation, visible progress, competition, and social accountability
Users need diet advice	Users need personalized assessment, diet plans, follow-ups, chat support, and accountability
Users enroll but drop off	Users need nudges, reminders, recovery flows, and repeat engagement loops
Corporates want wellness	Corporates need engagement, measurable participation, retention value, and revenue-linked wellness programs
External vendors provide consultations	BFHL needed an owned care-delivery capability to control quality, cost, and scalability

Design Reframe

From wellness content and one-off campaigns to an integrated wellness operating model combining gamification, expert support, follow-up systems, service workflows, and corporate wellness outcomes.

5. Business Objectives and Success Metrics

Objective	Product Interpretation
GMC Retention	Use wellness engagement and measurable participation to increase perceived value for corporate clients
Corporate Wellness Revenue	Create monetizable wellness programs through activity challenges, diet/nutrition support, weight management, and fitness services
Cost Optimization	Replace external dietician vendors with an in-house platform and dietician team
User Engagement	Drive active participation through step challenges, rewards,

	leaderboards, and team formats
Care Continuity	Move diet support from isolated consultations to structured follow-ups and progress tracking

Metric Area	Primary / Secondary Use
Active Users	Primary metric for activity and Step Tracker challenges
Cost Saving	INR 95 lakhs saved by replacing external dietician vendors
Repeat Consultations	Improved; exact numbers not available
Engagement	Improved; exact quantified engagement metrics not available
Consultation Volume / Utilization	Not available
Customer NPS / Feedback	Not available

6. Users, Stakeholders, and Operating Model

User / Stakeholder	Need
Wellness Users	Motivation, expert support, simple journeys, reminders, progress visibility, and repeat engagement
Corporate / GMC Clients	Higher employee engagement, retention value, and outcome-oriented wellness programs
Dieticians	Structured platform for booking, assessment, diet plans, follow-ups, chat support, records, and reminders
Fitness / Activity Users	Challenges, rewards, leaderboards, team competition, and social nudges
Product Team	Clear workflows, service controls, issue resolution, and measurable adoption
Operations / Service Team	Scheduling, missed-consultation handling, communications, and support escalation
Business / Sales Teams	Corporate wellness proposition, monetization levers, and retention story

7. Discovery Inputs and Source Basis

This case study is built using confirmed project context from Samadhan and the uploaded Wellness artifacts. The source artifacts support the team structure, dietician operating model, consultation SOP, dietician qualifications and responsibilities, activity challenge mechanics, virtual route concepts, and gamified Step Tracker logic.

Source Artifact	Information Used
Org Chart.pptx	Wellness Squad/team context and team member names
Dietician Roles and Responsibilities.docx	Mandatory and good-to-have qualifications; client management, meal planning, counselling, content, SME, PRD/user story review responsibilities
Dietician SOP.docx	Initial consultation, diet-plan creation, follow-up scheduling, reminders, missed-consultation handling, chat support, records, TATs
Dietician Issues Tracker.xlsx	Operational issues around appointment scheduling, follow-up flow, missed-call communication, EMR cancellation

	reasons, diet-plan fields, duration changes
Diet Numbers and Requirements.xlsx	Capacity/cost planning context for in-house dietician model
Justice League Finale v1.pptx	Gamified Step Tracker mechanics, rewards, badges, leaderboards, side quests, avatars, poke-a-friend, virtual routes
Kilimanjaro Trek.xlsx	Virtual map challenge / route challenge context

8. Problem Statements

8.1 Portfolio-Level Problem Statement

BFHL wellness users and corporate clients needed a structured engagement and care-delivery model because generic wellness content, isolated activity tracking, and externally managed diet consultations could not reliably create motivation, repeat engagement, follow-up accountability, cost control, or corporate wellness value.

8.2 Activity / Step Tracker Problem Statement

Wellness users needed a more engaging way to sustain physical activity because simple step tracking does not create enough motivation, social accountability, progress visibility, or repeat participation, resulting in drop-offs after initial enrolment.

8.3 Diet & Nutrition Problem Statement

Wellness users needed structured nutrition support because diet and weight-management outcomes require health-context assessment, personalized meal planning, follow-ups, chat support, reminders, and progress tracking rather than generic diet content or one-off consultations.

8.4 Operating Model Problem Statement

BFHL needed an in-house dietician operating model because scaling diet and weight-management programs required standardized roles, consultation SOPs, follow-up TATs, record keeping, capacity planning, quality control, and cost ownership instead of continued dependence on external vendors.

9. As-Is Pain Points

Area	Pain Point	Design Interpretation
Activity	Plain step tracking can become repetitive	Gamification and social competition were needed to sustain engagement
Activity	Users need visible progress and rewards	Virtual routes, badges, rewards, and leaderboards provide progress loops
Diet	External vendor-led diet support created cost dependency	In-house platform and dieticians were needed for cost and quality control
Diet	Diet advice needs personalization	Medical history, 24-hour diet recall, preferences, goals, and schedule had to be captured
Follow-Up	Users miss consultations or drop out	Automated reminders, rescheduling, and concern follow-ups were needed
Operations	Nutrition care requires service TATs	Consultation duration, diet-plan TAT, chat response TAT, reminders, and missed-consultation TAT had to be defined
Corporate	Wellness programs need measurable engagement	Active users and challenge participation became key success lenses

10. Product Strategy

The Wellness strategy had two major pillars: engagement-led activity and expert-led nutrition/weight management. These were connected by a broader business goal: build corporate wellness value that supports GMC retention and corporate wellness revenue.

Strategic Pillar	Product Strategy
Gamified Activity	Use themed challenges, step goals, side quests, rewards, leaderboards, team formats, and social nudges to increase active usage
Expert-Led Diet & Nutrition	Build an in-house dietician platform with personalized consultations, diet plans, follow-ups, chat support, and records
Weight Management	Combine dietician support, reminders, follow-ups, progress tracking, and repeat consultations to support outcomes
Fitness	Position fitness as part of the broader wellness ecosystem along with activity and diet/nutrition
Corporate Monetization	Use wellness programs and challenges as value-added propositions for corporate/GMC clients

11. Activity, Step Tracker, and Gamified Challenges

The Step Tracker and activity stream was designed to turn walking and daily movement into a game-like journey. Instead of relying only on step counts, the experience used themed routes, daily missions, standing events, optional side quests, rewards, badges, avatars, leaderboard logic, team competition, and social nudges.

Gamification Element	Purpose
Daily Step Goals	Give users a clear daily activity target
Standing Events	Reduce continuous inactivity and add another activity dimension
Side Quests	Allow easy, medium, and hard optional tasks for extra motivation
Virtual Routes	Create journey-based progress instead of isolated step counts
Rewards and Badges	Create positive reinforcement and completion moments
Leaderboard	Drive competition and social accountability
Team Challenges	Support corporate/group participation and social motivation
Poke-a-Friend	Use peer nudges to bring inactive users back
Avatars and Collectibles	Make progress personalized and playful

11.1 Challenge Formats That Went Live

Challenge Format	Status / Purpose
Step Challenge	Went live; primary activity engagement format
Everest Challenge	Went live; virtual map challenge based on progressive journey completion
Kilimanjaro Challenge	Went live; virtual route/challenge format
Team Challenges	Went live; used for group/corporate participation and

	competition
Rewards and Leaderboards	Went live; used to increase active usage and competitive motivation

Activity Design Principle

The design intent was to move from passive step tracking to active participation loops: mission, progress, reward, competition, social nudge, and repeat engagement.

12. Dietician Platform and Nutrition Operating Model

The Diet & Nutrition stream was the deepest operating-model build inside the Wellness cohort. BFHL moved from paying external dietician vendors to building a custom in-house dietician platform and internal service model. The custom platform went live and served all wellness users. Three in-house dieticians were initially onboarded.

Capability	Delivered Status
Consultation Booking	Went live
Diet-Plan Creation	Went live
Follow-Up Scheduling	Went live
Chat Support	Went live
Automated Reminders	Went live
EMR / Progress Records	Went live
Missed-Consultation Handling	Went live
Concern Follow-Up	Went live as part of operating workflow
Dietician Workflow Controls	Went live as part of custom platform and SOP

12.1 Dietician Roles and Responsibilities

Responsibility Area	Scope
Client Management	Consult users, understand goals, dietary needs, preferences, restrictions, and manage personalized plans
Meal Planning	Design and manage personalized meal plans
Progress Monitoring	Assess client progress and adjust plans as required
Query Handling	Answer diet-related queries, including diabetic diet queries where applicable
Counselling	Provide lifestyle and diet counselling through calls, chats, and other channels
Content and Education	Develop educational content and train other dietitians
Product SME Role	Collaborate with PMs as dietetic subject matter experts and review PRDs/user stories

12.2 Consultation Workflow

Step	Workflow Detail
Initial Assessment	Review health history, medical condition, goals, 24-hour diet recall, preferences, food pattern, and daily schedule
Expectation Setting	Explain the full wellness journey, follow-up importance, platform trust, and user responsibilities
Diet Plan Creation	Create and assign personalized diet plan after initial

	consultation
Chat Support	Support users for queries related to the provided diet plan
Follow-Up Scheduling	Schedule the next consultation around 15 days or one month depending on user need
Reminder Communication	Send automated reminders before follow-up consultations
Missed Consultation Recovery	Auto-reschedule and trigger follow-up communication or concern call
Record Keeping	Maintain records of consultations, diet plans, messages, and user progress

12.3 Key TATs Designed in the SOP

Process Step	TAT / Operating Rule
Initial Consultation	45-75 minutes per consultation
Diet Plan Creation	Within 48 hours of initial consultation
Chat Support	Immediate during business hours; maximum 12-hour delay otherwise
Next Consultation Scheduling	Automated within 15 minutes post-consultation
Reminder Messages	48 hours and 24 hours before consultation
Missed Consultation Rescheduling	Automatic within 24 hours of missed appointment
Missed Consultation Follow-Up	Contact within 12 hours
Documentation	Continuous and secured immediately after entry

Operating Model Shift

The dietician platform was not simply a booking tool. It created an owned care-delivery system with expert assessment, personalized diet planning, reminders, follow-ups, missed-consultation recovery, chat support, and record keeping.

13. Weight Management and Fitness Layer

The Wellness cohort also included Weight Management and Fitness. The dietician platform created the nutrition and follow-up backbone needed for weight-management journeys. Activity challenges and Step Tracker created the movement and engagement backbone. Fitness sat as the third layer of the wellness ecosystem, creating a broader proposition beyond diet alone.

Layer	Contribution to Wellness Portfolio
Diet & Nutrition	Expert-led assessment, diet plans, counselling, follow-ups, chat support, and progress tracking
Activity / Step Tracker	Daily movement, step goals, team challenges, rewards, leaderboards, and active user growth
Weight Management	Combination of diet support, progress tracking, behavioural nudges, and repeat consultations
Fitness	Complements activity and diet through broader wellness program positioning
Corporate Wellness	Packages activity, diet, weight management, and fitness as GMC retention and revenue levers

14. Design Thinking Process

Stage	How It Applied in Wellness
Empathize	Understand that users need motivation, expert support, reminders, follow-up accountability, and care continuity rather than generic wellness content
Define	Frame the problem as a combined engagement and care-delivery gap across activity, diet, weight management, and fitness
Ideate	Develop solution tracks around gamified challenges, virtual routes, dietician platform, consultation workflows, reminders, chat support, and progress records
Prototype / Define	Translate ideas into challenge formats, dietician SOPs, roles/responsibilities, platform capabilities, TATs, and operational workflows
Deliver	Launch gamified activity challenges and the custom in-house dietician platform with all major capabilities
Scale	Use active users for activity engagement, in-house dietician model for cost control, and corporate wellness value for GMC retention/revenue

15. Delivered Capabilities

15.1 Activity / Step Tracker

- Step Challenge went live.
- Everest and Kilimanjaro virtual route challenges went live.
- Team challenges went live.
- Rewards and leaderboard mechanics went live.
- Active users was the primary metric for activity challenges.
- Corporate/GMC linkage was part of the business context.

15.2 Diet & Nutrition / Weight Management

- Custom in-house dietician platform went live.
- Consultation booking went live.
- Diet-plan creation went live.
- Follow-up scheduling went live.
- Chat support went live.
- Automated reminders went live.
- EMR and progress records went live.
- Missed-consultation handling went live.
- Three in-house dieticians were initially onboarded.
- The platform served all wellness users.
- External dietician vendors were fully replaced.

16. Metrics, Impact, and Caveats

Impact Area	Confirmed Position
External Vendor Cost	External dietician vendors fully replaced

Financial Saving	INR 95 lakhs saved
Dietician Team	3 in-house dieticians initially onboarded
Dietician Platform	Custom platform went live with all major capabilities
Engagement / Repeat Consultations	Improved; exact numbers not available
Activity Challenges	All challenge formats went live
Activity Metric	Active users was primary metric
Consultation Volume	Not available
Utilization Rate	Not available
NPS / Feedback	Not available

Caveat Discipline

The document intentionally avoids claiming consultation volume, utilization rate, NPS, or percentage improvement because those numbers are not available. The supported claims are the go-live scope, INR 95 lakhs saving, vendor replacement, improved engagement/repeat consultations, and active-user focus for activity challenges.

17. Your Role and Leadership

As Lead Product Manager for the entire Wellness cohort, Samadhan owned the product direction across Activity, Step Tracker, Diet & Nutrition, Weight Management, and Fitness from January 2024 to September 2024. The assignment included both product build and operating-model creation.

Ownership Area	Role Description
Portfolio Leadership	Owned the complete Wellness cohort across activity, diet, weight management, and fitness
Team Leadership	Managed Maaz Modak, Saumya Shukla, Pragya Kumpawat, Aditi Rana, and Mahak Sonekar
Dietician Platform	Led creation of custom in-house dietician platform and workflow capabilities
Operating Model	Defined dietician roles, SOP, consultation flow, TATs, follow-up and missed-consultation workflows
Cost Optimization	Replaced external dietician vendors and enabled INR 95 lakhs saving
Gamification	Led Step Tracker / activity challenge formats including virtual routes, rewards, leaderboards, and team challenges
Business Alignment	Connected wellness capabilities to GMC retention and corporate wellness revenue

18. Interview and Resume Narrative

18.1 Interview-Ready Narrative

After HealthPay and Partner Center, I transitioned to BFHL Wellness and led the complete Wellness cohort from January 2024 to September 2024. The cohort covered Activity, Step Tracker, Diet & Nutrition, Weight Management, and Fitness.

The core product insight was that wellness cannot be solved through content alone. Users need motivation, expert guidance, follow-ups, accountability, reminders, and habit loops. For activity, we moved beyond passive step

tracking and launched gamified challenges with themed journeys, rewards, leaderboards, team formats, and social nudges. Active users was the primary metric.

The deeper operating-model work was in Diet & Nutrition. I built a custom in-house dietician platform and service model with consultation booking, diet-plan creation, follow-up scheduling, chat support, automated reminders, EMR/progress records, and missed-consultation handling. We onboarded three in-house dieticians and served all wellness users through the platform.

This fully replaced external dietician vendors and saved INR 95 lakhs. The initiative improved engagement and repeat consultations while supporting the broader business goals of GMC retention and corporate wellness revenue.

18.2 Resume Bullet

Resume Bullet

Led BFHL Wellness cohort across Activity, Step Tracker, Diet & Nutrition, Weight Management, and Fitness; launched gamified activity challenges and built a custom in-house dietician platform with consultation booking, diet-plan creation, follow-ups, chat support, reminders, and EMR/progress tracking, replacing external dietician vendors and saving INR 95 lakhs while supporting GMC retention and corporate wellness revenue.

19. Final One-Line Framing

Final One-Line Framing

Led BFHL Wellness from Jan 2024 to Sep 2024, building an integrated wellness engagement and care-delivery portfolio across activity challenges, dietician-led nutrition, weight management, and fitness; launched gamified Step Tracker journeys and a custom in-house dietician platform that replaced external vendors and saved INR 95 lakhs.
