

Creanovation Labs / Creanovation Technologies

EdTech SaaS Product Case Study

SREM | Forms Dot Star

Product Strategy | Enrollment Automation | Student Engagement | Institutional SaaS

Project Positioning

A dual-product EdTech SaaS case study covering SREM and Forms Dot Star, two institutional platforms built to digitize student engagement, admissions, application processing, communication, payments, document workflows, and analytics across Indian educational institutions.

Dimension	Summary
Company	Creanovation Labs / Creanovation Technologies (same company)
Role	Product leader / end-to-end product owner for EdTech SaaS products
Primary Products	SREM and Forms Dot Star
Market	Educational institutions, colleges, universities, and student enrollment teams across India
Core Product Themes	Student engagement, admissions CRM, application forms, document processing, communication automation, analytics, payments, and mobile-first access
Primary Design Challenge	Digitizing fragmented, paper-heavy, institution-specific admission and student relationship workflows while maintaining configurability at scale

10. Resume Bullets

1. Executive Summary

At Creanovation Labs / Creanovation Technologies, Samadhan Mishra led product strategy and execution for two major EdTech SaaS products: SREM and Forms Dot Star. Both platforms served the education sector by digitizing student engagement, admission workflows, application processing, communication, document handling, payments, and analytics for institutions across India.

SREM focused on Student Engagement and Relationship Management for institutions, scaling from 150 to 500+ institutional clients and supporting 2M+ student interactions annually. Forms Dot Star focused on enrollment and student lifecycle management, serving 300+ colleges and universities and processing 500K+ student applications annually.

The common design-thinking insight across both products was that educational institutions did not simply need software to collect student data. They needed a configurable operating system for admissions, engagement, communication, document verification, fee collection, funnel tracking, and decision-making across distributed teams and diverse institutional workflows.

Product	Primary Problem Solved	Scale / Outcome
SREM	Student engagement, lead management, admission workflow automation, multi-channel communication, analytics, and digital fee collection	Scaled from 150 to 500+ institutional clients; 2M+ student interactions annually; 5M+ student applications processed; INR 15Cr+ annual platform revenue
Forms Dot Star	Application forms, admission CRM, document processing, payment collection, white-labeled portals, and analytics for enrollment teams	Served 300+ institutions across 15+ states; 500K+ student applications annually; 1.5M+ student applications processed; INR 8Cr+ ARR

2. Company and Product Context

Creanovation Labs and Creanovation Technologies are treated here as the same company, based on the provided context. The company operated in the EdTech SaaS space, serving educational institutions that needed to modernize admissions, student engagement, communication, application management, fee collection, and reporting.

The education market context was operationally complex: institutions had fragmented admission teams, paper-heavy workflows, inconsistent follow-up practices, limited funnel visibility, manual document verification, offline payment collection, and varying requirements across colleges, universities, coaching institutions, and regional markets.

Strategic Product Thesis

The products were built around a simple but powerful thesis: education institutions needed configurable SaaS workflows that could digitize admissions and engagement without forcing every institution into one rigid process.

Institutional Pain Point	Product Response
Paper-heavy admissions and student forms	Digital application forms, mobile-responsive portals, document upload, automated processing
Manual student follow-ups	CRM workflows, lead scoring, multi-channel communication, reminders, funnel tracking
Slow application/admission processing	Automated workflows, document verification, role-based queues, dashboards
Fragmented payment collection	Payment gateway integration and digital fee collection

Low visibility into funnel performance	Real-time analytics dashboards for conversion and engagement
Different institutions needed different branding and workflows	White-labeled and configurable product architecture

3. Design Thinking-Led Product Framing

The strongest way to position this work is not as generic EdTech software delivery. The products were designed through an operational design-thinking lens: understand how institutions actually manage admissions and student engagement, identify where paper, follow-up delays, data fragmentation, and decision bottlenecks occur, and then convert those patterns into reusable SaaS capabilities.

Design Thinking Stage	Application in Creanovation Products
Empathize	Studied institutional admission teams, counselors, administrators, students, and operations users who managed applications, follow-ups, documents, communication, and fee collection.
Define	Reframed the problem from "online forms" or "student CRM" to an institutional operating system for admissions and engagement.
Ideate	Converted pain points into modules: lead scoring, automated admission workflow, forms, CRM, document processing, payments, analytics, communication, RBAC, and integrations.
Prototype / Build	Delivered configurable workflows, mobile-first forms, dashboards, multi-channel communication, document verification, and payment journeys.
Validate / Scale	Scaled products across hundreds of institutions, improved conversion and processing metrics, and drove retention through continuous enhancements and support.

Core Product Reframe

The real problem was not merely collecting student applications. The real problem was helping institutions convert interest into enrollment through structured engagement, automated processing, communication, document validation, payment collection, and analytics.

4. Product Case Study: SREM

Student Engagement and Relationship Management

SREM was positioned as a comprehensive EdTech SaaS platform for Student Engagement and Relationship Management. It served educational institutions across India and supported student engagement, lead management, admissions, communication, analytics, and workflow automation.

SREM Dimension	Confirmed Detail
Product Type	EdTech SaaS platform for student engagement and relationship management
Institutional Scale	500+ educational institutions
Growth	Scaled from 150 to 500+ institutional clients, representing 233% growth in 2.5 years

Student Interaction Scale	2M+ student interactions annually
Applications Processed	5M+ student applications through the platform
Revenue Impact	INR 15Cr+ annual revenue through platform subscriptions
Customer Retention	98% customer retention rate
Team Leadership	Built and mentored cross-functional team of 8+ members across engineering, design, and operations

4.1 SREM - User and Business Problem

Educational institutions needed to manage large volumes of prospective students, applications, follow-ups, communications, payments, and admissions decisions. Existing processes were often manual, paper-based, and dependent on individual counselors or admission staff. This created poor follow-up discipline, limited funnel visibility, slow processing, and inconsistent student experience.

SREM Problem Statement

Educational institutions needed a scalable student engagement and admission-management platform because manual lead handling, fragmented communication, paper-based admissions, and weak funnel visibility were slowing conversion, increasing operational effort, and limiting digital transformation.

4.2 SREM - Product Modules and Capabilities

Module / Capability	Product Intent
Intelligent Lead Scoring	Prioritize high-intent student prospects and improve counselor productivity.
Automated Admission Workflow	Move admissions from manual processing to structured workflow automation.
Multi-Channel Communication	Reach students through SMS, email, and WhatsApp with reliable delivery.
Analytics Dashboard	Provide real-time visibility into student engagement and admission funnel performance.
Digital Fee Collection	Enable payment gateway integration for institutional fee collection.
Role-Based Access Control	Support institutional hierarchies, departments, and user permissions.
Mobile-First Responsive Interface	Improve accessibility for rural and distributed institutions.

4.3 SREM - Key Product Achievements

- Designed and launched an intelligent lead scoring system, improving conversion rates by 45%.
- Implemented automated admission workflow, reducing processing time from 7 days to 2 days.
- Developed a multi-channel communication platform across SMS, email, and WhatsApp with 95%+ delivery rates.
- Created analytics dashboards for real-time student engagement and admission funnel insights.
- Achieved 98% customer retention through continuous product improvements and support.
- Digitized admission processes for 500+ institutions, reducing dependency on paper-based workflows.

4.4 SREM - Technical Innovation

Technical Capability	Outcome / Rationale
Scalable Microservices-Based Platform	Supported 10K+ concurrent users and scalable institutional usage.

Payment Gateway Integration	Enabled digital fee collection and improved transaction convenience.
Role-Based Access Control	Supported institutional hierarchies and differentiated access.
Mobile-First UI	Improved accessibility across rural and distributed institutions.
Analytics Layer	Enabled real-time decision-making for admission teams.

5. Product Case Study: Forms Dot Star

Forms Dot Star was a comprehensive EdTech SaaS platform focused on enrollment and student lifecycle management for colleges and universities. It digitized application forms, CRM workflows, document processing, payment collection, institution-specific branding, and application-funnel analytics.

Forms Dot Star Dimension	Confirmed Detail
Product Type	EdTech SaaS platform for enrollment and student lifecycle management
Institutional Scale	300+ colleges and universities across India
Geographic Reach	15+ states
Application Volume	500K+ student applications annually
Total Applications Processed	1.5M+ student applications through the platform
Annual Revenue	INR 8Cr+ ARR through subscriptions and transaction fees
Customer Satisfaction	92% customer satisfaction score
Operational Impact	Reduced institutional operational costs by 40% through digitization

5.1 Forms Dot Star - User and Business Problem

Colleges and universities needed to digitize enrollment workflows without losing control over their unique forms, admission rules, branding, document requirements, and payment processes. Manual form collection and document verification created delays, poor visibility, and high operational cost.

Forms Dot Star Problem Statement

Educational institutions needed a configurable enrollment platform because manual forms, offline documents, fragmented application tracking, and limited analytics slowed admissions, increased operational cost, and weakened student experience.

5.2 Forms Dot Star - Product Portfolio

Module	Purpose
Application Forms	Digitize institutional application submission and reduce paper dependency.
CRM	Track prospective applicants, communications, follow-ups, and application status.
Document Processing	Upload, scan, validate, and process student documents.
Analytics	Provide real-time funnel, conversion, and application insights.
Payment Gateway	Collect application fees through multiple payment modes.
White-Labeled Portal	Allow institutions to customize branding and workflows.
API Integrations	Connect with university management systems for data

	continuity.
--	-------------

5.3 Forms Dot Star - Key Product Achievements

- Built the product from the ground up for educational institutions with 500K+ student applications annually.
- Increased platform adoption by 150% year-over-year through continuous feature enhancements.
- Improved enrollment conversion rates for clients by 25-30% through optimized application workflows.
- Launched automated document verification, reducing processing time by 70%.
- Designed mobile-responsive application portal, increasing mobile submissions by 200%.
- Achieved 92% customer satisfaction through user-centric product development.

5.4 Forms Dot Star - Technical Innovation

Technical Capability	Outcome / Rationale
OCR-Based Document Scanning	Reduced manual data entry and accelerated document processing.
Real-Time Analytics Dashboard	Improved visibility into application funnel and conversion.
Payment Gateway Integration	Enabled multiple payment modes for application fees.
White-Labeled Solution	Supported institution-specific branding and workflow customization.
University System APIs	Enabled seamless data flow with university management systems.

6. Platform-Level Design and Architecture Themes

Across SREM and Forms Dot Star, the product architecture followed common SaaS principles: configurability, scale, modularity, automation, institutional hierarchy support, and mobile accessibility. The products had to serve many institutions while allowing each institution to maintain its own admission rules, forms, communication preferences, payment setup, and reporting needs.

Theme	How It Appeared Across Products
Configurability	Institution-specific forms, workflows, branding, communication templates, permissions, and funnel stages.
Automation	Lead scoring, admission workflows, document verification, communication triggers, and processing queues.
Scalability	Microservices-based architecture and concurrent-user support for large institutional usage.
Mobile Accessibility	Mobile-first interfaces for students and institutions, especially in distributed/rural contexts.
Analytics and Visibility	Real-time dashboards for engagement, admission funnel, application status, and conversion.
Payments	Application fee and digital fee collection through payment gateway integrations.
Access Control	Role-based permissions for institutional hierarchies and operating teams.
Integration	APIs with university management systems and other institutional systems.

7. Product Leadership and Operating Model

The product leadership role extended beyond feature delivery. It included product strategy, discovery, roadmap planning, lifecycle ownership, cross-functional execution, customer feedback loops, go-to-market alignment, institutional onboarding, and continuous optimization.

Leadership Area	Contribution
Product Strategy	Defined roadmap aligned with digital transformation needs of the education sector.
Lifecycle Ownership	Managed discovery, requirements, build, deployment, adoption, optimization, and support.
Cross-Functional Team Building	Built and mentored 8+ member team across engineering, design, and operations.
Customer-Centric Iteration	Improved features based on institutional feedback, adoption patterns, and support insights.
Growth and Adoption	Scaled institutional adoption across both SREM and Forms Dot Star.
Revenue Orientation	Connected product adoption to subscription revenue, transaction fees, and retention.

Product Leadership Signature

The work combined discovery-led product strategy, SaaS platform thinking, workflow automation, analytics, payment integration, and customer success discipline to scale institutional EdTech products in a complex Indian education market.

8. Business Impact Summary

Impact Area	SREM	Forms Dot Star
Institutional Scale	500+ institutions	300+ colleges and universities
Growth	150 to 500+ clients; 233% growth in 2.5 years	150% YoY adoption growth
Student/Application Scale	2M+ student interactions annually; 5M+ student applications processed	500K+ applications annually; 1.5M+ applications processed
Conversion / Efficiency	45% conversion improvement via lead scoring; processing time reduced from 7 days to 2 days	25-30% enrollment conversion improvement; document processing time reduced by 70%
Communication / Access	95%+ delivery rates across SMS, email, WhatsApp; mobile-first interface	200% increase in mobile submissions
Financial Impact	INR 15Cr+ annual platform revenue	INR 8Cr+ ARR
Retention / Satisfaction	98% customer retention	92% customer satisfaction

Note: The metrics in this case study are based on the provided project inputs and should be used as project-portfolio claims. If this document is shared externally, any numbers that need formal verification should be cross-checked against company records or public collateral.

9. Portfolio Narrative

At Creanovation Labs / Creanovation Technologies, I led product strategy and execution for institutional EdTech SaaS products focused on admissions, student engagement, enrollment, communication, payments, document processing, and analytics.

For SREM, I led end-to-end product strategy for a Student Engagement and Relationship Management platform that scaled from 150 to 500+ institutional clients and supported 2M+ student interactions annually. The product introduced intelligent lead scoring, automated admission workflows, multi-channel communication, analytics dashboards, digital fee collection, role-based access control, and mobile-first accessibility. It improved conversion rates by 45%, reduced processing time from 7 days to 2 days, and achieved 98% retention.

For Forms Dot Star, I owned product management for a comprehensive enrollment and student lifecycle platform serving 300+ colleges and universities. The platform included application forms, CRM, document processing, analytics, payment collection, OCR-based verification, white-labeled institution portals, and university system integrations. It increased platform adoption by 150% year-over-year, improved enrollment conversion by 25-30%, reduced document processing time by 70%, and generated INR 8Cr+ ARR.

Across both products, the product strategy was grounded in the same design-thinking insight: Indian educational institutions needed more than online forms or CRM tools. They needed configurable operating platforms that could digitize institution-specific admission and engagement workflows while improving conversion, efficiency, visibility, and student experience.

10. Resume Bullets

- Led end-to-end product strategy for SREM, an EdTech SaaS platform for Student Engagement and Relationship Management, scaling it from 150 to 500+ institutional clients and supporting 2M+ student interactions annually.
- Designed intelligent lead scoring and automated admission workflows, improving conversion rates by 45% and reducing admission processing time from 7 days to 2 days.
- Owned product management for Forms Dot Star, a SaaS enrollment and student lifecycle platform serving 300+ colleges/universities and processing 500K+ applications annually.
- Launched OCR-based document verification, mobile-responsive application portals, payment integrations, analytics dashboards, and white-labeled workflows, reducing document processing time by 70% and increasing mobile submissions by 200%.
- Built and mentored an 8+ member cross-functional team across engineering, design, and operations while managing product lifecycle from discovery to deployment and optimization.

11. Final One-Line Framing

One-Line Case Study Framing

Led product strategy for Creanovation's institutional EdTech SaaS portfolio, scaling SREM and Forms Dot Star across 500+ and 300+ institutions respectively by digitizing admissions, student engagement, application processing, communication, payments, document workflows, and analytics for the Indian education sector.
